

RAYAN EROLD TSAPI MEGUIE

New York, NY • (929) 660-7912 • rayanerold@gmail.com • github.com/RayanErold • linkedin.com/in/rayanmeguie

EDUCATION

B.S. Computer Science and Information Security John Jay College of Criminal Justice	Expected 2027
A.S. Computer Science LaGuardia Community College	Graduated 2025

PROFESSIONAL EXPERIENCE

Software Engineering Intern Mentor Me Collective — <i>edtech nonprofit Empowering First-Generation Technologists</i> New York, NY	June – Oct 2025
---	-----------------

- Improved mentor-mentee match quality by 70%, measured by compatibility scores across 500+ users, by engineering an LLM-powered Python system with semantic embeddings that cut manual curation effort by 20%.
- Increased user retention by 8%, measured across 5,000+ tracked interactions, by building real-time REST APIs with Express.js that surfaced personalized engagement signals to platform users.
- Boosted interaction rates by 10%, measured via A/B test lift across two cohorts, by shipping automated Slack and email notification pipelines alongside a real-time admin analytics dashboard.

Software Engineering Fellow Tech Talent Pipeline New York, NY	April – June 2025
---	-------------------

- Delivered 3 production-grade applications, measured by live CI/CD deployments on Render and Netlify, by completing an intensive full-stack bootcamp focused on end-to-end delivery.
- Accelerated feature delivery across all projects, measured by integration coverage across 6 third-party APIs, by implementing reusable JWT and OAuth auth modules alongside Claude, GPT-4o, Stripe, and Resend.

TECHNICAL PROJECTS

DateSpark AI-Powered Social Discovery Live Site github.com/RayanErold/datespark	Jan. 2026 – Present
---	---------------------

- Designed a custom 4-hour time-based cache validation layer using Supabase, reducing external API call volume and quota costs by 60% while ensuring real-time event updates for the end-user base.
- Built a multi-source API integration pipeline (Ticketmaster, SeatGeek, SerpApi) with a fuzzy-matching deduplication algorithm, delivering 100% unique local event listings across 12 distinct categories.
- Implemented Stripe billing verification and secure server-side auth checking for standard and premium subscribers, protecting high-tier features and eliminating unauthorized user access risks.

Agentic Healthcare Navigator Multi-Agent AI System Live Site github.com/RayanErold/agentic-healthcare-navigator	Mar. – Apr. 2026
--	------------------

- Developed a multi-agent reasoning system using Google Gemini 2.5 Pro and a Python fallback engine for remote care clinicians, programmatically validating LLM care plans against clinical safety rules to eliminate AI hallucinations.
- Created an interactive Streamlit and Pandas telemetry dashboard for a cross-functional team of healthcare providers, enabling real-time vital trend monitoring and 1-click clinical protocol authorization.
- Implemented a dual-agent validation protocol (Diagnosis LLM and Medical Fact-Checker Logic Agent), enforcing a mandatory human-in-the-loop authorization step for all automated emergency medical protocols.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript **Backend:** Node.js, Express.js, FastAPI, REST APIs
Frontend: React.js, React Native **Databases:** PostgreSQL, Supabase, Firebase, NoSQL
Cloud & DevOps: Docker, CI/CD, GCP, Render, Netlify **AI/ML:** LLM APIs, Prompt Engineering, Embeddings, RAG

INVOLVEMENT

ColorStack Member Active member engaging in peer networking, technical career workshops, and recruiting events connecting underrepresented CS students with top tech employers.	2025 – Present
---	----------------

Hackathon Winner — Most Innovative Project NY Tech Week Built TerraWatch, a tool tracking the environmental impact of generative AI via token optimization and prompt compression, with real-time telemetry of datacenter water usage, electricity consumption, and CO ₂ emissions per inference.	2026
